DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 8-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 8 recites "according to a predetermined program depending on a predetermined first parameter and a first measured value." The meaning of this limitation is not clear as the disclosure appears to indicate that the first measured value is a first parameter, whereas the claim language implies that the first parameter and the first measured value are separate features.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 8 and 12-14 are rejected under 35 U.S.C. 102(b) as being anticipated by WO 02083473.

WO 02/083473 discloses all the limitations of the instant claims including; automatically actuating the brake (4) according to a predetermined program depending

on a predetermined first parameter (friction coefficient limit) and a first measured value; and terminating the program depending on at least one of a predetermined second parameter (friction coefficient limit), and a second measured value, wherein the brake is automatically actuated in intervals.

Regarding claims 13-14, WO 02/083473 discloses a third parameter Tc which prevents the start of the braking program.

Claims 8-9 and 13-14 are rejected under 35 U.S.C. 102(b) as being anticipated by DE 10139908.

DE 10139908 discloses all the limitations of the instant claims including; automatically actuating the brake according to a predetermined program depending on a predetermined first parameter (TW), and a first measured value; and terminating the program depending on at least one of a predetermined second parameter (k decoding pulses reached), and a second measured value, wherein the brake is automatically actuated in intervals.

Regarding claim 9, the decoding pulses are representative of time, as broadly recited.

Regarding claims 13-14, DE 10139908 discloses a third parameter SNC which prevents the start of the braking program.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 10-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 02083473 in view of Bohm et al (US 6536562).

WO 02/083473 discloses all the limitations of the instant claims with exception to the use of rigidity in determining the first parameter. Bohm et al discloses a similar braking system and further teaches the use of rigidities the actuator control parameters to provide accurate control with minimum sensed information. It would have been obvious to one of ordinary skill in the art at the time the invention was made to include rigidity in the determination of the first parameter of WO 02/083473 to increase accuracy and improve performance.

Response to Arguments

Applicant's arguments filed 8/03/2009 have been fully considered but they are not persuasive.

Regarding Fagergren and the limitation of "brake is automatically actuated at intervals", it is noted that the control taught by the reference automatically shifts the brake distribution between the service and auxiliary braking systems based in the first parameter. Therefore, the additional service brake actuation in response to the friction coefficient can be considered an "automatic actuation" lasting for some interval.

Applicant's have not presented arguments regarding the rejection under DE 101 39 908. It is maintained that the rejection is proper.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bradley T. King whose telephone number is (571) 272-7117. The examiner can normally be reached on 11:00-7:30 M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Siconolfi can be reached on (571) 272-7124. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
